

Health Care

Ethical Perspective

- C Health and healing is central to Christianity. The NYSCC and its member denominations see health care as a social good that cannot be treated as a market good. They have long favored universal health care as a vital basic right.
- C The government has responsibility for the public welfare (common good), to establish justice, and to manage public resources with a minimum of waste.

Background

- C US has always recognized the responsibility of the state and national government to provide health care (community hospitals, hospitals for mentally ill, VA, Medicaid). Today's nationwide crisis means government is not doing an acceptable job of meeting this responsibility.
- C A just health care system would make the same benefits available to all. Presently some have access to quality health care professionals and high tech equipment (those who have sufficient means, are on Medicaid/Medicare, veterans or have employers that provide health care as a benefit). The working poor and those who cannot afford what is available use emergency rooms or wait until more expensive care is needed.

CLegislators have a responsibility to be sure public health dollars are spent for legitimate purposes – and achieve the greatest impact at the lowest cost.

C Instead the government has allowed the private sector to continue its demonstrated inability to provide parity in access. The social good is often superseded by private interests (e.g. pharmaceuticals, insurance).

C It has allowed the burden of providing care to be on employers which hampers the ability of US businesses to compete with those in other industrialized countries.

What Will Help

C Passage of Health Partnership Act as a potential first step toward affordable health care for all by reducing the number of uninsured in 5 years and improving quality for all.

C Passage of HR 676 which provides free health care for all in the US and its territories financed by the government by paperwork reduction, bulk purchase of medications, existing health care funding, increased income tax on top 5%, a modest payroll tax and a small tax on stocks and bonds. It would permit medical professionals to focus on patient care and not justification of that care to insurers.
